Silhouette[®] lift

Rediscover the
original youthfulness
of your face

- ✓ 45 minutes procedure
- ✓ Local anaesthetic
- ✓ 2/3 days recovery time
- ✓ Natural long-lasting results

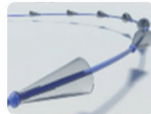

Silhouette

lift

Silhouette-Lift sutures use a revolutionary suspension device which lifts and reposition saggging tissues.

Thread with cones

Silhouette-Lift is ideal for correcting signs of aging in the nasolabial folds, expression lines, the jowls and the neck.

Silhouette-Lift offers
a gentle solution with
fast natural-looking results !

BEFORE

AFTER

(*) Silhouette-Lift sutures are made of polypropylene, a material biocompatible with the human body which has been used for many years in cardiovascular and ophthalmic surgery. The cone-shaped Silhouette-Lift threads have been granted FDA (Food and Drug Administration) Approval in the United States of America and are CE marked in European Union. In addition to use it in cosmetic, Silhouette-Lift sutures are used clinically by surgeons within major hospitals through out Europe and United States of America.

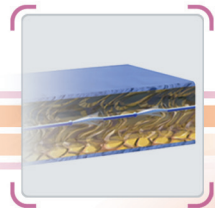

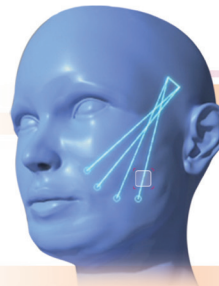

This technique is suitable for both men and women who want to achieve a subtle younger-looking appearance without the constraint of undergoing a traditional facelift.

► The procedure, **which lasts only 45 minutes**, is performed **under local anaesthetic** by a certified Silhouette-Lift surgeon or doctor .

► **You leave the same day** with a younger-looking face and can resume your normal activities and social life **within 2/3 days**.

Procedure

- 1 Local anaesthetic
- 2 Micro-incision : insertion of threads
- 3 Anchoring of absorbable micro-cones deep within the facial tissues
- 4 Attachment and fastening the suspension threads
- 5 Closure of the incision

- **45 minutes procedure under local anaesthetic**
- **2/3 days recovery time**
- **Natural, longer-lasting results**
